

90-Day Customer Acquisition System

Somalia Gemstone Testing Laboratory

Objective: Build a repeatable system that turns Somali miners, gemstone traders, jewelers, exporters, collectors and buyers into qualified WhatsApp conversations, paid testing jobs and referrals.

Primary conversion channel: WhatsApp Business. **Primary discovery channels:** Facebook, TikTok and Instagram. **Core offer:** professional gemstone identification/examination, mineral testing, gold testing and clear laboratory reports.

1. The Acquisition Funnel

Use one simple journey for every customer:

Awareness → WhatsApp enquiry → Qualification → Price/Service recommendation → Test booked → Specimen received → Testing → Report delivered → Follow-up → Referral/repeat test.

Do not try to sell a laboratory test immediately to everyone. First sell **certainty**: “Let us help you understand what you have and what examination is appropriate.”

2. Who You Target

Segment	Problem	Offer / message	Weekly prospect target
Miners	Unsure what a stone is worth	Identification + examination + report	20
Gemstone traders	Need confidence before buying/selling	Fast identification + documentation	10
Jewelers / goldsmiths	Need stone verification	Stone testing + report	10
Exporters	Need documentation and buyer confidence	Trusted reports + repeat service	5
Collectors / private buyers	Need authenticity confidence	Independent examination	5

3. 90-Day Targets

Baseline target: 45 new prospects/week × 12 weeks = **540 targeted prospects**. Aim for at least 20 meaningful WhatsApp enquiries/week, 10 qualified leads/week, 5 booked tests/week and 2 referrals/week once the system is operating.

Metric	90-day target	How to track
New targeted prospects	540+	CRM/lead sheet
WhatsApp enquiries	240+	WhatsApp chat count
Qualified leads	120+	CRM stage
Tests booked	60+	Booking log
Completed tests	50+	Lab/test register
Referrals	20+	Referral field
Educational content	60–80 pieces	Facebook/TikTok/Instagram

4. Days 1–30 — Build the Foundation

Goal: Make the business easy to trust, easy to contact and easy to buy from.

Week 1 — Set up the conversion machine

- Complete WhatsApp Business profile: name, description, location, hours, email and website/social links.
- Create a clean service catalog: Gemstone Identification, Gemstone Examination, Mineral Testing, Gold Testing, Laboratory Report, Pre-Purchase Testing.
- Create labels/stages: NEW LEAD, CONTACTED, QUALIFIED, PRICE SENT, TEST BOOKED, SPECIMEN RECEIVED, TESTING, REPORT READY, PAID, COMPLETED, FOLLOW-UP, REFERRAL.
- Prepare a one-page price/service sheet. Do not publish prices that you cannot consistently honor.

Week 2 — Build proof

Create 10–15 simple educational posts/videos: natural vs synthetic, ruby vs garnet, sapphire basics, emerald basics, why testing matters, how a laboratory examination works, what a report contains, common buying mistakes, gold testing, and how miners can add value through documentation.

Week 3 — Build the lead list

Build a spreadsheet with: Name, business, city, customer type, phone/WhatsApp, source, date contacted, status, service need, next follow-up date, result and referral source. Add 45 qualified prospects per week from public business pages, mining groups, jewelry businesses, trader networks, referrals and local contacts.

Week 4 — Start daily outreach

Daily: contact 5 miners + 3 traders + 2 jewelers + 1 exporter. Personalize every message. Ask a question instead of sending a mass sales pitch. Follow up after 2–3 days when appropriate.

5. Days 31–60 — Generate Consistent Leads

Goal: Move from setup to a predictable weekly flow of conversations and tests.

Every week:

- Publish 5–7 short videos/posts.
- Add 45 new qualified prospects.
- Send personalized outreach to the highest-priority prospects.
- Follow up with every warm lead.
- Ask every satisfied customer for 1 referral.
- Contact 2 potential partners: jewelers, mining companies, traders, exporters, associations or related service providers.
- Review which content and customer segment produced the most enquiries.

Content formula: Hook → show a real gemstone/problem → explain one useful fact → show the testing/report process → CTA: “Send a photo on WhatsApp for guidance.”

Lead magnet: Offer a simple “Gemstone Identification Guide for Somalia” or a short checklist: “5 things to check before buying a gemstone.” The goal is to start conversations, not give away a full laboratory service.

6. Days 61–90 — Scale What Works

Goal: Turn the best-performing acquisition channels into a repeatable sales engine.

- Identify the top 2 customer segments by booked tests and revenue.
- Identify the top 2 cities/areas producing customers.
- Double outreach to the best-performing segments.
- Run small, controlled Meta campaigns that send people to WhatsApp, only after the organic offer and response process are working.

- Create a referral program: customers who introduce a new testing customer receive a clearly defined benefit where commercially appropriate.
- Build partnerships with jewelers, mining companies and traders who can refer stones for independent testing.
- Create a monthly “Gemstone Testing Day” promotion with limited appointment slots if capacity allows.

7. WhatsApp Conversion System

Auto/welcome message:

Assalamu Alaikum ■ Welcome to Somalia Gemstone Testing Laboratory. We provide gemstone identification, examination, mineral testing, gold testing and laboratory reports. How can we help you today?

Photo request:

Please send clear photos of the stone from several angles. If possible, include the stone beside a ruler or scale. Tell us where it came from and what you believe it is.

Qualification questions:

1. What type of stone do you have?
2. Where did it come from?
3. Do you need identification, authenticity examination, grading support or a written report?
4. How many stones do you have?
5. When do you need the result?

Price response:

The correct service depends on the stone and the level of examination required. Send us a photo and the details above, and we will recommend the appropriate test and price before you proceed.

Follow-up:

Assalamu Alaikum. Just following up on the gemstone you sent earlier. If you still need identification/testing, I can help you choose the appropriate examination.

8. Daily Operating Rhythm

Time block	Action
Morning	Check WhatsApp; respond to all new enquiries; update CRM.
Late morning	Contact 5–10 new prospects.
Afternoon	Testing/report work; photograph specimens and educational content.
Evening	Publish 1 short educational post/video; follow up with warm leads.
End of day	Record enquiries, booked tests, revenue, next actions and referrals.

9. CRM Pipeline

Use one row per lead. Never leave a warm lead without a next action date.

NEW → CONTACTED → INTERESTED → QUALIFIED → PRICE SENT → TEST BOOKED → SPECIMEN RECEIVED → TESTING → REPORT READY → PAID → COMPLETED → FOLLOW-UP → REFERRAL.

Minimum CRM fields: lead name, phone, city, customer type, stone, source, date first contacted, current stage, estimated value, last contact, next action, outcome, referral source.

10. Content Calendar

Day	Post idea	CTA
Mon	Can you tell ruby from garnet by eye?	Send a photo on WhatsApp
Tue	3 mistakes people make when buying gemstones	Ask before you buy
Wed	What happens during gemstone testing?	Book an examination
Thu	Emerald / sapphire / ruby educational post	Send your stone for identification
Fri	Behind-the-scenes lab/testing content	Message us

Day	Post idea	CTA
Sat	Miner story / customer education / FAQ	Share with a miner or trader
Sun	Weekly Q&A or gemstone myth	Ask your question

11. Referral & Partnership Engine

After every completed job, ask: “Do you know one miner, trader, jeweler or buyer who would benefit from independent gemstone testing?”

Priority partners: jewelers/goldsmiths, mining companies, gemstone traders, exporters, mining associations, geological/mining service firms, detector/equipment sellers, and trusted community/business networks. Give partners a simple referral process and track every referral source.

12. Paid Advertising — Only After the Funnel Works

Start with a small test budget rather than spending heavily. Run ads around a single offer such as “Identify your gemstone before you sell it.” Send the ad directly to WhatsApp. Test different videos and audiences; stop ads that produce conversations but no qualified leads or bookings.

Somalia had an estimated 5.47 million internet users and 3.51 million social-media user identities in late 2025; Meta's advertising resources indicated about 2.70 million Facebook users. These figures support Facebook as a useful discovery channel, while WhatsApp should be the practical conversion channel. ■cite■turn0search0■

13. Weekly Scorecard

KPI	Target/week	Actual	Action if below target
New prospects	45		Increase prospecting blocks
New WhatsApp enquiries	20+		Improve content/CTA
Qualified leads	10+		Improve qualification
Tests booked	5+		Improve offer/follow-up
Completed tests	5+		Fix booking/collection process
Follow-ups completed	100% of warm leads		Protect a daily follow-up block
Referrals	2+		Ask every completed customer
Posts/videos	5–7		Batch-create content

14. The 90-Day Execution Checklist

- WhatsApp Business profile completed
- Service catalog completed
- Quick replies created
- Lead labels/pipeline created
- CRM spreadsheet active
- 45 prospects/week added
- 5–7 educational posts/videos/week published
- Warm leads followed up every week
- Referral request made after completed jobs
- 2 partnership conversations/week
- Best customer segment identified by Day 60
- Best acquisition channel identified by Day 60
- Small paid campaign tested by Day 90
- 90-day results reviewed and next-quarter plan created

15. Core Rule

Do not measure success by followers alone. Measure **qualified conversations** → **tests booked** → **tests completed** → **revenue** → **referrals** → **repeat customers**. The objective is to build a local reputation for trustworthy gemstone information and turn that reputation into a repeatable customer pipeline.
